

# Brains

## a game about brains

### what's going on?

The world is being taken over by zombies! Only the player who can line up 4 dice of their color can hope to survive! Because yeah, reasons!

### contents

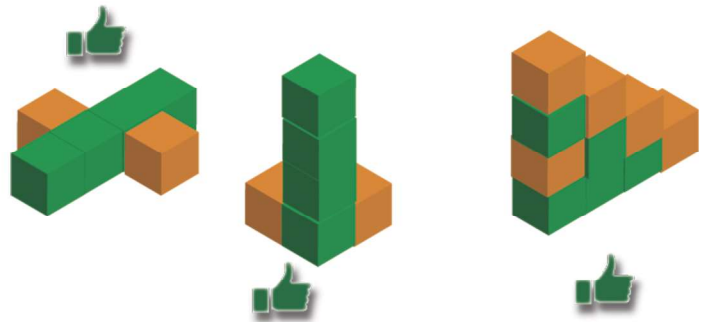

12 Dice of each color  
(48 in total)  
Because more dice is more fun!\*

### Set up

1. Each player chooses a color.
2. The last player to have won a game goes first.
3. If none of the players have ever won a game before, the first player is decided randomly.

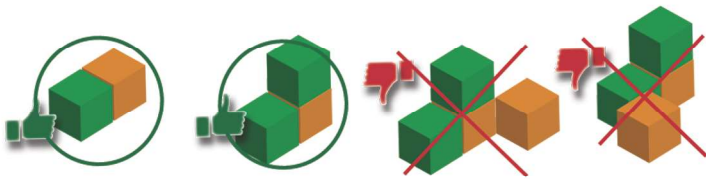

### goal of the game

The first player to line up 4 dice of their color wins the game.

### How to Play

The players will take turns, placing one die of their color every turn, until one of them manages to line up 4 dice of their own color.

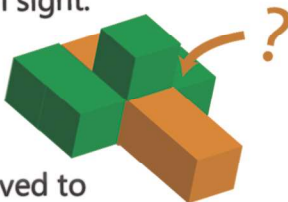

### Lining Up

To form a complete line of 4, the dice must be aligned with each other in a straight line: horizontally, vertically or diagonally. This includes all three dimensions.

### Calling Blind

During the course of the game, the dice might pile up and hide others from sight. In that case, the hidden dice still count to create lines. Once a player believes he has completed a line of dice, he simply calls for his victory. The dice are then removed to verify if a line was really completed. If it was, the player wins, if it wasn't, that player is declared the sole loser while all the other players can enjoy his defeat.

### Ending the game

As soon as a player can line up 4 dice of their color, the game ends and that player is declared the winner. If no player can win the game before all of the dice have been played, the game is declared a tie.
